# Australian Reels Slot Machine <br> By Michael Shackleford, A.S.A. 

January 13, 2009

## Game Description

This is a three-reel, single-line, stepper slot.
URL: wizardofodds.com/play/slot-ausreels/
For academic use only

| Pay Table | coin |  |  |  | 2 coins | 3 coins |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| Win | 8,000 | 16,000 | 25,000 |  |  |  |
| Three flags | 1,000 | 2,000 | 3,000 |  |  |  |
| Blue 7, white 7, red 7 (in order) | 300 | 600 | 900 |  |  |  |
| Three blue 7's | 200 | 400 | 600 |  |  |  |
| Three white 7's | 100 | 200 | 300 |  |  |  |
| Three red 7's | 40 | 80 | 120 |  |  |  |
| Any three 7's | 40 | 80 | 120 |  |  |  |
| Three kangaroos | 30 | 60 | 90 |  |  |  |
| Three platypuses | 20 | 40 | 60 |  |  |  |
| Thee echidnas | 2 | 4 | 6 |  |  |  |
| Any three animals | 1 | 2 | 3 |  |  |  |
| Any three symbols |  |  |  |  |  |  |

The next table shows the symbols on each reel, and the weighting. The symbols do not have to necessarily be the same on each reel, but in this case, they are. Each stop of each reel has an individual weighting. The probability the reel will stop in any given position is proportional to the weighting. The sum of all weights of each reel is 64 . So, for example, the probability that reel 1 will stop on the kangaroo in stop number 8 is $5 / 64$.

Reel Strips and Weights

| Stop | Symbol | Reel 1 | Reel 2 | Reel 3 |
| ---: | :--- | ---: | ---: | ---: |
| 1 | blank | 3 | 4 | 6 |
| 2 | flag | 1 | 1 | 1 |
| 3 | blank | 3 | 4 | 6 |
| 4 | echidna | 5 | 5 | 4 |
| 5 | blank | 2 | 2 | 3 |
| 6 | blue 7 | 1 | 3 | 3 |
| 7 | blank | 2 | 2 | 3 |
| 8 | kangaroo | 5 | 4 | 3 |
| 9 | blank | 1 | 2 | 2 |
| 10 | white 7 | 6 | 1 | 4 |
| 11 | blank | 1 | 2 | 2 |
| 12 | echidna | 6 | 6 | 5 |
| 13 | blank | 2 | 2 | 2 |
| 14 | red 7 | 4 | 3 | 1 |
| 15 | blank | 1 | 2 | 2 |
| 16 | platypus | 5 | 5 | 4 |
| 17 | blank | 1 | 2 | 2 |
| 18 | kangaroo | 4 | 4 | 3 |
| 19 | blank | 1 | 2 | 2 |
| 20 | red 7 | 3 | 2 | 1 |
| 21 | blank | 2 | 2 | 2 |
| 22 | platypus | 5 | 4 | 3 |

## Stop Ranges

| Stop | Symbol | Reel 1 | Reel 2 | Reel 3 |
| ---: | :--- | ---: | ---: | ---: |
| 1 | blank | 1 to 3 | 1 to 4 | 1 to 6 |
| 2 | flag | 4 to 4 | 5 to 5 | 7 to 7 |
| 3 | blank | 5 to 7 | 6 to 9 | 8 to 13 |
| 4 | echidna | 8 to 12 | 10 to 14 | 14 to 17 |
| 5 | blank | 13 to 14 | 15 to 16 | 18 to 20 |
| 6 | blue 7 | 15 to 15 | 17 to 19 | 21 to 23 |
| 7 | blank | 16 to 17 | 20 to 21 | 24 to 26 |
| 8 | kangaroo | 18 to 22 | 22 to 25 | 27 to 29 |
| 9 | blank | 23 to 23 | 26 to 27 | 30 to 31 |
| 10 | white 7 | 24 to 29 | 28 to 28 | 32 to 35 |
| 11 | blank | 30 to 30 | 29 to 30 | 36 to 37 |
| 12 | echidna | 31 to 36 | 31 to 36 | 38 to 42 |
| 13 | blank | 37 to 38 | 37 to 38 | 43 to 44 |
| 14 | red 7 | 39 to 42 | 39 to 41 | 45 to 45 |
| 15 | blank | 43 to 43 | 42 to 43 | 46 to 47 |
| 16 | platypus | 44 to 48 | 44 to 48 | 48 to 51 |
| 17 | blank | 49 to 49 | 49 to 50 | 52 to 53 |
| 18 | kangaroo | 50 to 53 | 51 to 54 | 54 to 56 |
| 19 | blank | 54 to 54 | 55 to 56 | 57 to 58 |
| 20 | red 7 | 55 to 57 | 57 to 58 | 59 to 59 |
| 21 | blank | 58 to 59 | 59 to 60 | 60 to 61 |
| 22 | platypus | 60 to 64 | 61 to 64 | 62 to 64 |

## Game Operation

1. Choose 3 random integers from 1 to 64 , one for each reel. Map each number to the corresponding symbol in the reel strips, according to the given weights.
2. Stop the reels on those positions.
3. Score the result.
4. Pay the player.

## Example

The random numbers chosen are $52,8,63$. The screen will look like this:

Total Symbol Weights

| Totals | Reel 1 | Reel 2 | Reel 3 | Product |
| :--- | ---: | ---: | ---: | ---: |
| flag | 1 | 1 | 1 | 1 |
| blue 7 | 1 | 3 | 3 | 9 |
| white 7 | 6 | 1 | 4 | 24 |
| red 7 | 7 | 5 | 2 | 70 |
| kangaroo | 9 | 8 | 6 | 432 |
| platypus | 10 | 9 | 7 | 630 |
| echidna | 11 | 11 | 9 | 1,089 |
| blank | 19 | 26 | 32 | 15,808 |
| total | 64 | 64 | 64 | 262,144 |

## Winning Combinations

Next is the fun part, calculating the number of combinations for each win. Let's start at the top.

Three flags: Obviously $1 \times 1 \times 1=1$
Blue 7, white 7, red 7 (in order): Flag or blue 7 in reel $1 \times$ flag or white 7 in reel $2 \times$ flag or red 7 in reel 3 - three flags (because it pays more) $=(1+1) \times(1+1) \times(1+2)-1=12-1$ $=11$

Three blue 7's: Flag or blue 7 in reel $1 x$ flag or blue 7 in reel $2 x$ flag or blue 7 in reel 3 - three flags - blue 7 in reel $1 x$ wild in reel $2 x$ wild in reel 3 (because it pays more as blue 7 , white 7 , red 7 ) $=2 \times 4 \times 4-1-(1 \times 1 \times 1)=32-2=30$.

Three white 7's: Flag or white 7 in reel $1 \times$ flag or white 7 in reel $2 x$ flag or white 7 in reel 3 - three flags - flag in reel $1 \times$ white 7 in reel $2 x$ wild in reel 3 (because it pays more as blue 7 , white 7 , red 7$)=(7 \times 2 \times 5)-1-(1 \times 1 \times 1)=68$.

Three red 7's: Flag or red 7 in reel 1 x flag or red 7 in reel 2 x flag or red 7 in reel 3 three flags - flag in reel $1 \times$ flag in reel $2 \times$ red 7 in reel 3 (because it pays more as blue 7 , white 7, red 7$)=(8 \times 6 \times 3)-1-(1 \times 1 \times 2)=141$.

Any three sevens: Any seven or flag in reel $1 x$ any seven or flag in reel $1 x$ any seven or flag in reel $2 x$ any seven or flag in reel $3-$ all higher paying wins $=15 \times 10 \times 10-$ $(1+11+30+68+141)=1500-251=1249$.

Three kangaroos: Flag or kangaroo in reel $1 \times$ Flag or kangaroo in reel $2 \times$ Flag or kangaroo in reel 3 - three flags $=(10 \times 9 \times 7)-1=629$.

Three platypuses: Flag or platypus in reel $1 \times$ Flag or platypus in reel $2 \times$ Flag or platypus in reel 3 - three flags $=(11 \times 10 \times 8)-1=879$.

Three echidnas: Flag or echidna in reel $1 \times$ Flag or echidna in reel $2 \times$ Flag or echidna in reel 3 - three flags $=(12 \times 12 \times 10)-1=1439$.

Any three animals: Any animal or flag in reel $1 \times$ Any animal or flag in reel $2 x$ Any animal or flag in reel $3-$ three flags - three higher animal pays $=31 \times 29 \times 23-$ $(1+629+879+1,439)=20,677-2948=17,729$.

Any three symbols $=$ Non-blank in reel $1 \times$ Non-blank in reel 2 x
Non-blank in reel 3 - all higher pays $=(64-19) \times(64-26) \times(64-32)-$
$(1+11+30+68+141+1249+629+879+1,439+17,729)=32,544$.

The next table summaries everything. The pay column is the win per coin, based on three coins bet. The probability column is the number of winning combinations, calculated above. The return column is the product of the win and combinations. The probability is the number of combinations divided by the total possible ( $64^{\wedge} 3=262,144$ ). The return is the product of the win and probability. The lower right cell shows a return of $97.01 \%$.

Return Table

| Combination | Pays | Probability <br> Combinations | Return <br> Combinations | Probability | Return |
| :--- | ---: | ---: | :--- | ---: | :--- |
| Three flags | 8333 | 1 | 8333 | 0.000004 | 0.031789 |
| Blue 7, white 7, red 7' | 1000 | 11 | 11000 | 0.000042 | 0.041962 |
| Three blue 7's | 300 | 30 | 9000 | 0.000114 | 0.034332 |
| Three white 7's | 200 | 68 | 13600 | 0.000259 | 0.051880 |
| Three red 7's | 100 | 141 | 14100 | 0.000538 | 0.053787 |
| Any three 7's | 40 | 1249 | 49960 | 0.004765 | 0.190582 |
| Three kangaroos | 40 | 629 | 25160 | 0.002399 | 0.095978 |
| Three platypuses | 30 | 879 | 26370 | 0.003353 | 0.100594 |
| Thee echidnas | 20 | 1439 | 28780 | 0.005489 | 0.109787 |
| Any three animals | 2 | 17729 | 35458 | 0.067631 | 0.135262 |
| Any three symbols | 1 | 32544 | 32544 | 0.124146 | 0.124146 |
| Total |  | 54720 | 254305 | 0.208740 | 0.970098 |

Notes
1 In order
If the player bets one or two coins, instead of 3 , his win per coin will be reduce by 333.33 for three flags. The expected cost of that reduction is $(1 / 262144)^{*}(333.33)=0.13 \%$. So, the total return for one or two coins bet is $97.05 \%-0.13 \%=96.92 \%$.

## Summary

| 1 coin return | $96.88 \%$ |
| :--- | ---: |
| 2 coin return | $96.88 \%$ |
| 3 coin return | $97.01 \%$ |
| Hit freq. | $20.87 \%$ |
| Variance | 84.15 |
| Std dev | 9.17 |

The next three tables show the probability that the return of the game will fall between the specified markers and number of spins. For example, with one million spins there is a $95 \%$ chance that the return of the game will fall between $95.21 \%$ and $102.70 \%$. It is beyond the scope of this document to explain how these were calculated, but any introductory statistics text will explain it under "confidence intervals."
$\mathbf{9 0 \%}$ Confidence Interval - Max Coins Bet

| Spins |  | Lower Bound | Upper Bound |
| ---: | ---: | ---: | ---: |
| 1,000 | $49.30 \%$ | $144.72 \%$ |  |
| 10,000 | $81.92 \%$ | $112.10 \%$ |  |
| 100,000 | $92.24 \%$ | $101.78 \%$ |  |
| $1,000,000$ | $95.50 \%$ | $98.52 \%$ |  |
| $10,000,000$ | $96.53 \%$ | $97.49 \%$ |  |

95\% Confidence Interval - Max Coins Bet

| Spins |  | Lower Bound | Upper Bound |
| ---: | ---: | ---: | ---: |
| 1,000 | $40.16 \%$ | $153.86 \%$ |  |
| 10,000 | $79.03 \%$ | $114.99 \%$ |  |
| 100,000 | $91.32 \%$ | $102.70 \%$ |  |
| $1,000,000$ | $95.21 \%$ | $98.81 \%$ |  |
| $10,000,000$ | $96.44 \%$ | $97.58 \%$ |  |

99\% Confidence Interval - Max Coins Bet

| Spins | Lower Bound | Upper Bound |
| ---: | ---: | ---: |
| 1,000 | $22.29 \%$ | $171.73 \%$ |
| 10,000 | $73.38 \%$ | $120.64 \%$ |
| 100,000 | $89.54 \%$ | $104.48 \%$ |
| $1,000,000$ | $94.65 \%$ | $99.37 \%$ |
| $10,000,000$ | $96.26 \%$ | $97.76 \%$ |
